

B Digit Driven Power

TIME LIMIT: 1.0s
MEMORY LIMIT: 256MB

You are given two integers N and X ($N \leq X$).

Your task is to find a non-negative integer V such that:

$$N + V \leq X$$

The number of zeros in the decimal representation of $(N + V)$ is minimized.

If there are multiple such values of V , find the smallest one.

INPUT

The first line of input contains a single integer T ($1 \leq T \leq 10^5$), the number of test cases.

The only line of input in each test case consists of two integers N and X ($0 \leq N \leq X \leq 10^{18}$).

OUTPUT

Print a single integer for each test case T , V — the value to be added to N .

SAMPLES

| Sample input 1 | Sample output 1 |
|----------------|-----------------|
| 3 | 2 |
| 109 150 | 0 |
| 11 12 | 111 |
| 1000 2000 | |
